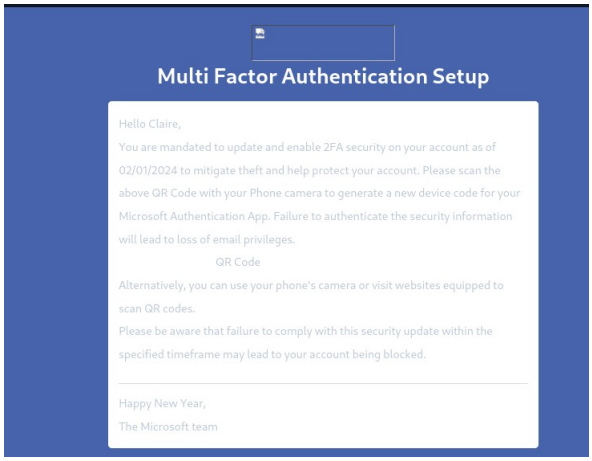
Device Action: Allowed

email from security@microsecmfa.com that send to claire



Multi Factor Authentication Setup

Hello Claire,

You are mandated to update and enable 2FA security on your account as of 02/01/2024 to mitigate theft and help protect your account. Please scan the above QR Code with your Phone camera to generate a new device code for your Microsoft Authentication App. Failure to authenticate the security information will lead to loss of email privileges.

QR Code

Alternatively, you can use your phone's camera or visit websites equipped to scan QR codes.

Please be aware that failure to comply with this security update within the specified timeframe may lead to your account being blocked.

Happy New Year,

The Microsoft team

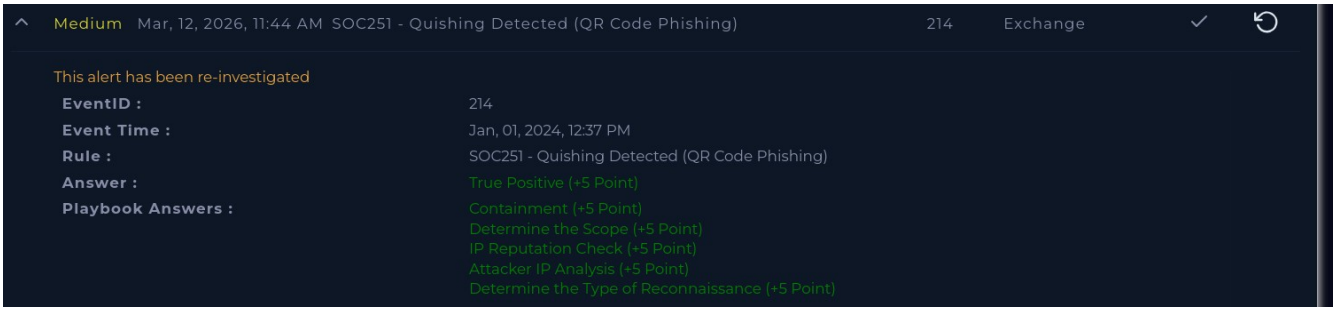
IP	158.69.201.47	Have 9/94 Reputation in VirusTotal
Email	security@microsecmfa.com	Attacker IP


Result :
After I Checked to virustotal the community said that the IP is several times send phising . So thats is True Positive that email contain QR code phising and after I checked claire computers in endpoint security there is no activity that claire open the QR code so I assume claire didn't scan the QR code that send through email but we still need isolate that email from claire email to futher investagation.
